

Appendix A – Pre MPA Commercial Fishing Value Maps

The following spatial data were collected by Ecotrust in 2005 to inform the California Central Coast Region MLPA planning process (please see Scholz et al. 2006b). In 2005, this data was collected at the region-fishery level and fishermen were asked to map and value his/her fishing grounds based on their cumulative fishing experience. For the MPA monitoring project, the pre-MPA spatial data collected in 2005 were re-analyzed at the port-fishery level to develop comparable data sets to the post-MPA spatial data sets collected in 2012.

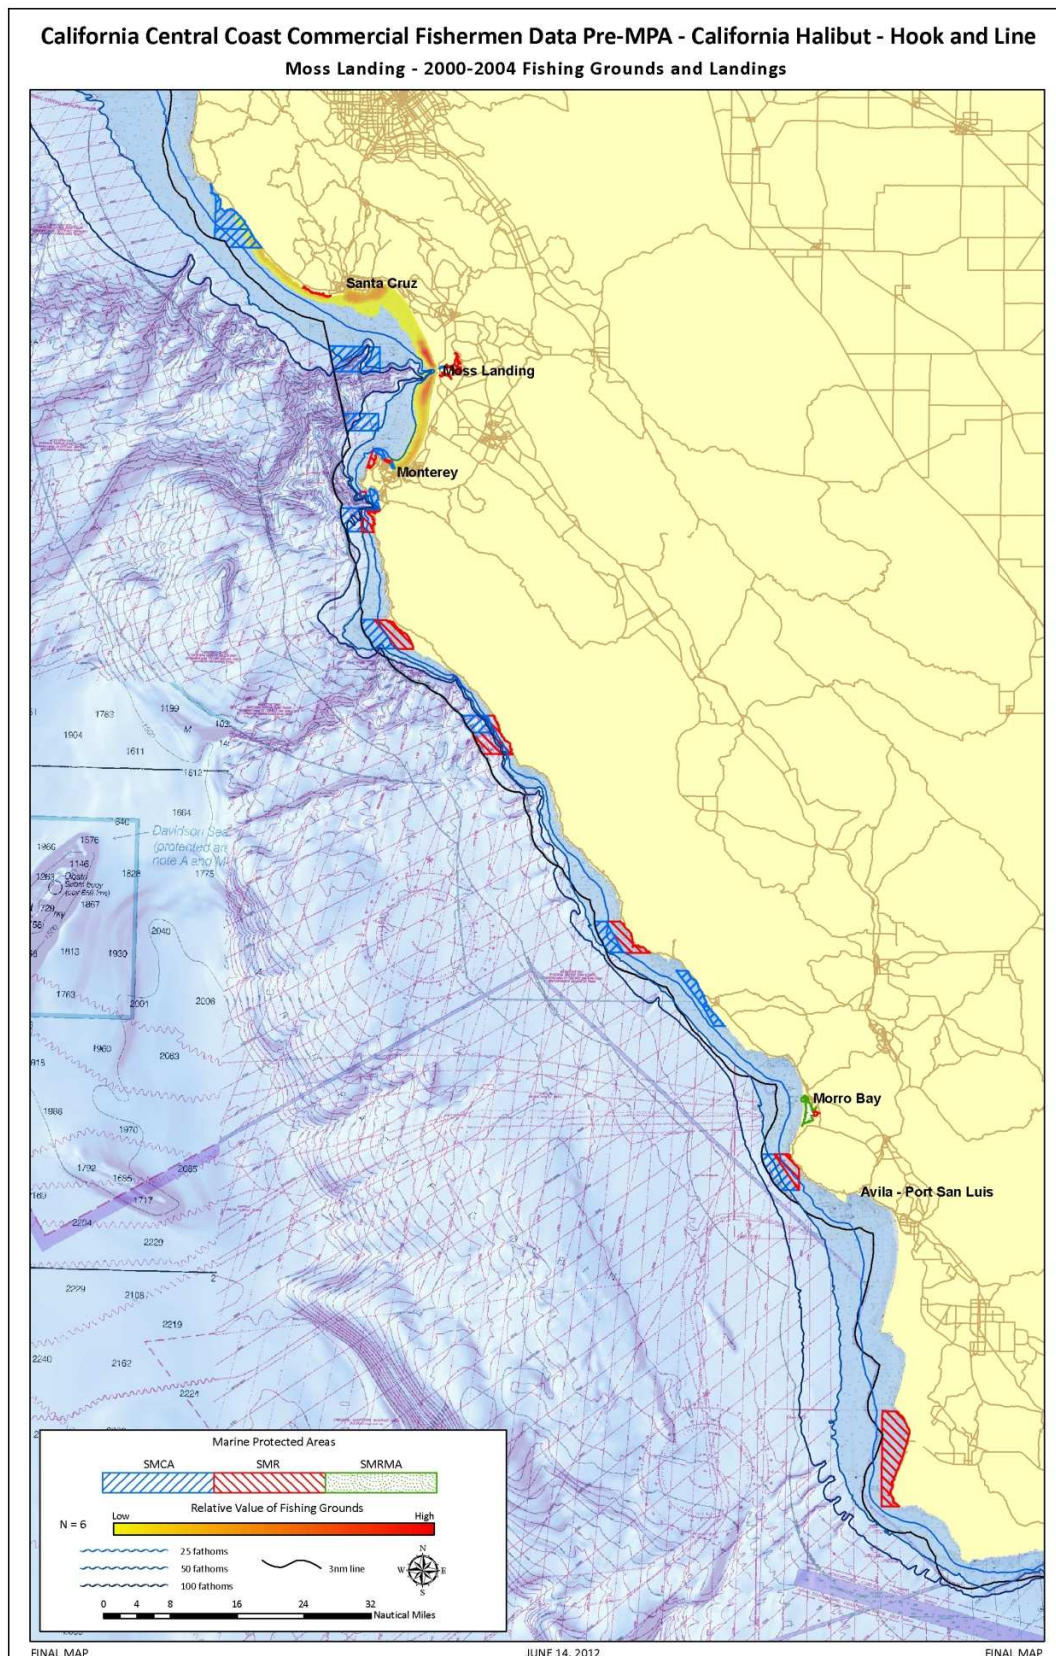

Assessing Spatial and Socioeconomic Change in the California Central Coast Commercial and CPFV Fisheries
